- Code blocks

Column 2

- Images
- Tables
- Quotes

Column 3

- Custom CSS
- Themes
- Directives

Code Examples

Syntax Highlighting

Multiple Languages

Marp supports various programming languages:

- JavaScript/TypeScript
- Python
- CSS
- You can add more languages by customizing the engine

```
// Solidity
contract Diamond {
    bytes32 constant DIAMOND_STORAGE_POSITION =
        keccak256("diamond.storage");

    struct DiamondStorage {
        mapping(bytes4 => address) facets;
    }

    function diamondStorage() internal pure
    returns (DiamondStorage storage ds) {
        bytes32 position = DIAMOND_STORAGE_POSITION;
        assembly {
            ds.slot := position
        }
    }
}
```

Thank you!
